# INTRODUCTION

The extreme climatic events are becoming more and more unpredictable and impactful, with heavy and more frequent rain concentrated in short amount of time, along with severe drought that can last for long periods.

The climate change is affecting the current life style of the society and the ecosystem operation, because it is suffering changes that impact not only the biodiversity but also the world economy.

The resilient development to climate is the one that combines mitigation and adaptation measures. However, this resilient development to climate becomes harder to achieve whenever there is a raise on global medium temperature.

**Nature needs to be in the center of the solutions.** The nature based solutions (NBS) are actions that use natural procedures and ecosystems to face the most pressing challenges of our time, such as the lack of water risk, with droughts and rain dearth, and the impact of extreme climate events, as floods and landslides. It is an approach of natural resources management that creates benefits for the biodiversity and at the same time promotes solutions for socioeconomic development and human well-being.

This inedited research quested to know how people from every region of this continental country understand the relation of nature in urban areas and the city resilience to extreme climate events, intensified by climate changes. In this publication, you are going to find the main data of the study showed in a visual way, in infographics that can be downloaded and shared.

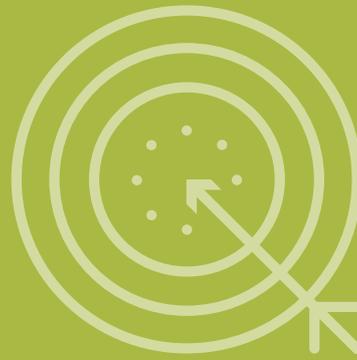

The research is a realization of Boticário Group Foundation for Nature Protection, in cooperation with UNESCO in Brazil and has the support of ANAMMA (National Association of towns and environment) and Urban bio connection alliance.

**Information is the first step  
for climate action!**

## MAIN GOAL

To know the opinion of the population about climate changes and environment

## SPECIFIC OBJECTIVES

- To understand the opinion of the population about nature in urban areas and how much they relate its existence to urban resilience and adaptability to extreme climate events;
- To identify how people realize climate changes and how much they attribute to public power the responsibility for climate actions;
- To understand if people already know the term Nature Based Solutions, if they relate the term with biodiversity conservation, and if they value the implantation of different solutions for the challenges cities are already facing.

## METODOLOGY

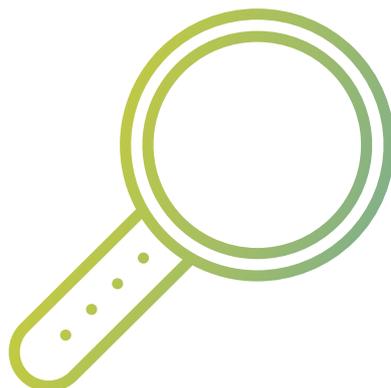

### QUANTITATIVE RESEARCH

The quantitative method is used to show the proportion of the inquired population that share opinion and behavior. It is designed to generate accurate and trustworthy measures.

The sample is composed by 2,000 interviewed, over eighteen years old, from 55 cities of the five Brazilian regions:

- 64% from affected areas\*
- 36% from unaffected areas
- 50,5% from capitals
- 49,5% from the interior of the country

\*People affected by disasters in the last five years – according to Talanoa Brazilian Institute (<https://politicaporinteiro.org/desastres>).

### TARGET PUBLIC

Adult population from every region of Brazil.

### SAMPLE

General sample: 2,000 interviews.

### MARGIN OF ERROR

Total: 2,2% for a reliability level of 95%.

### TECHNIQUE

Mixed – in person and by phone interviews.

### TOOL

Structured questionnaire with open and closed questions.

### COLLECTION PERIOD

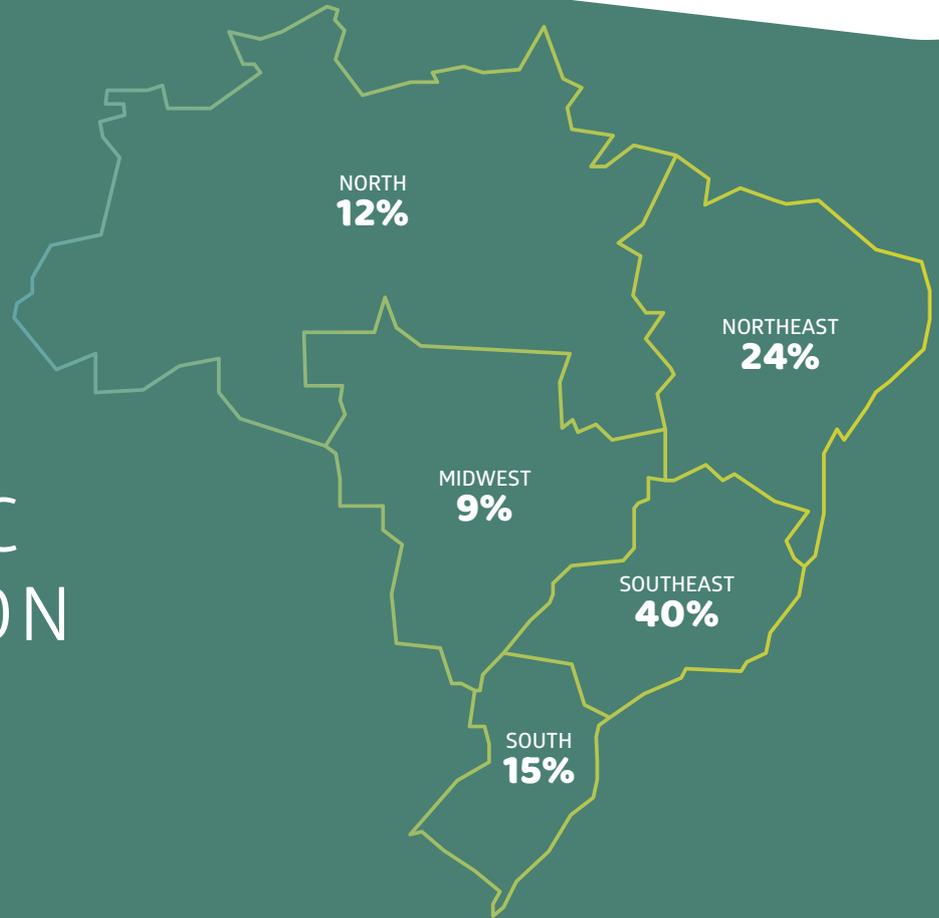

From July 13th to September 23rd, 2023.

### HIRED INSTITUTE

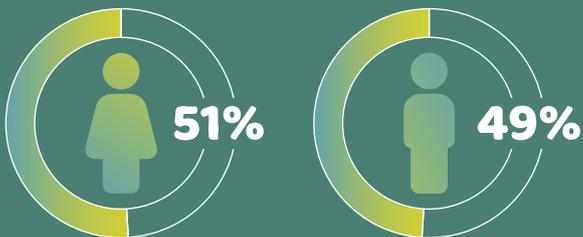

Zoom Research Intelligence .

# SAMPLE PROFILE

## GEOGRAPHIC DISTRIBUTION

## GENDER

## AGE RANGE

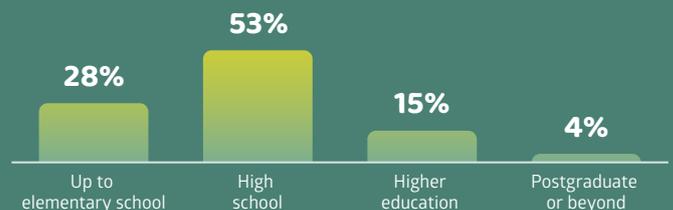

66% have children

## AVERAGE INCOME

**R\$ 5,411**

Per capita income: R\$ 1,804

## SCHOLARITY

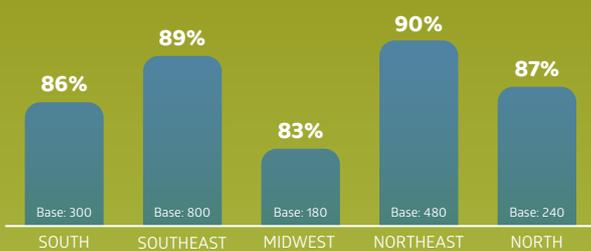

**More than 80%** of the interviewers relate to nature going to parks, beaches, gardens and other natural areas or look for physical and mental health balance in nature.

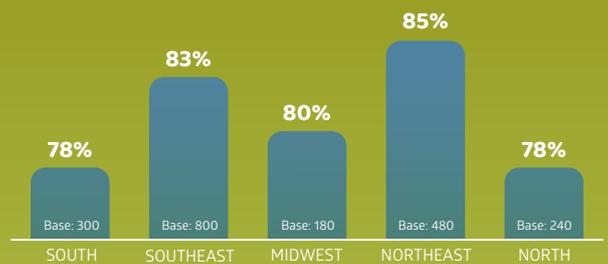

## Ways to relate to nature

### LEISURE AND TOURISM

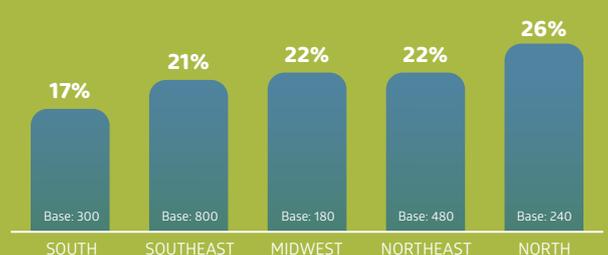

### BALANCE

### HEALTH

### INCOME GENERATION

Which of the options shows the way you relate with nature? | Multiple and Stimulated Answer | Base: 2000

# How Brazilians see nature in cities

**Tree-lined streets** (native trees that help to reduce the heat waves and bring thermal, visual and acoustic comfort)

77%

**Parks, forests or big public green areas** (that allows water infiltration or to reduce the heat island)

74%

**Green halls** (natural areas along streets or rivers with vegetation)

50%

**Ducted rivers** (transformation to direct rivers in a controlled way)

44%

**Community gardens** (place where the community get together to produce food)

37%

**Rain gardens** (gardens designed to retain rain water and prevent floods)

23%

**Green roofs** (building with plants in the roof helping to reduce the temperature)

16%

**77%** of the people who answered live in regions with tree-lined trees.

Despite that, **86%** realized that the green areas are decreasing.

**26%** live in regions without parks, forests or green areas nearby.

# EXPERIENCING THE CHANGES:

## perception of the impact

I feel bigger heat sensation in parts of the city where there are no green areas

AGREE COMPLETELY	76%
AGREE PARTIALLY	14%
NEITHER AGREE, NOR DISAGREE	1%
DISAGREE PARTIALLY	4%
DISAGREE COMPLETELY	4%

**90%** feel bigger heat sensation in parts of the city where there are no green areas.

Emphasis: 95% Midwest

I realize that the green areas of my city are decreasing

AGREE COMPLETELY	61%
AGREE PARTIALLY	25%
NEITHER AGREE, NOR DISAGREE	1%
DISAGREE PARTIALLY	7%
DISAGREE COMPLETELY	5%

**86%** realize that the green areas of the city are decreasing.

Emphasis: 91% Northeast

Housing in risk areas for flood are increasing in the last years

AGREE COMPLETELY	60%
AGREE PARTIALLY	18%
NEITHER AGREE, NOR DISAGREE	3%
DISAGREE PARTIALLY	10%
DISAGREE COMPLETELY	10%

**78%** say that in their city, housing in risk areas for flood are increasing in the last years.

Emphasis: 83% Southeast

I fear when there is forecast of heavy rain in the region I live in

AGREE COMPLETELY	46%
AGREE PARTIALLY	18%
NEITHER AGREE, NOR DISAGREE	3%
DISAGREE PARTIALLY	13%
DISAGREE COMPLETELY	20%

**64%** fear when there is forecast of heavy rain in their region.

Emphasis: 66% Southeast

I have realized more time without rain in the last years, even facing lack of water

AGREE COMPLETELY	38%
AGREE PARTIALLY	22%
NEITHER AGREE, NOR DISAGREE	3%
DISAGREE PARTIALLY	18%
DISAGREE COMPLETELY	19%

**60%** realized more time without rain in the last years, even facing lack of water.

Emphasis: 75% Midwest

In my city there are clean rivers and lakes and people enjoy leisure time there

AGREE COMPLETELY	33%
AGREE PARTIALLY	17%
NEITHER AGREE, NOR DISAGREE	2%
DISAGREE PARTIALLY	11%
DISAGREE COMPLETELY	38%

**50%** say that in their cities there are clean rivers and lakes and people enjoy leisure time there.

Emphasis: 75% North

The structure of my city is ready for heavy rain, storm or flood

AGREE COMPLETELY	10%
AGREE PARTIALLY	11%
NEITHER AGREE, NOR DISAGREE	2%
DISAGREE PARTIALLY	19%
DISAGREE COMPLETELY	57%

**76%** believe that the structure of their cities is not ready for heavy rain, storm or flood.

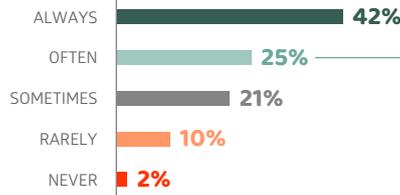

Emphasis: 83% North

# Climate at the radar:

## climate events frequency in cities

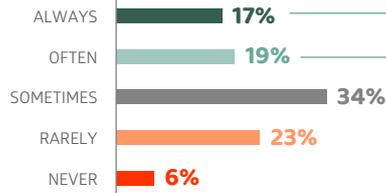

### Heat waves

**67%** of the people realize heat waves happening more often, emphasis in the North with 83%.

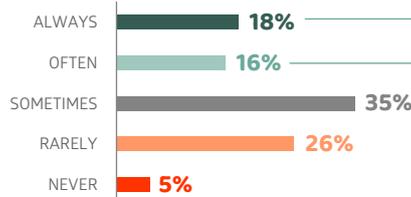

### Drought

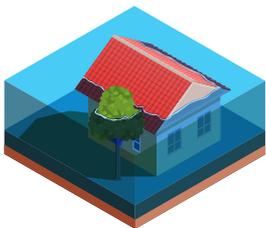

**36%** of the people realize drought or long periods without rain happening more often, emphasis in the Midwest with 55%.

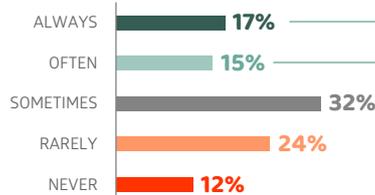

### Strong wind

**34%** of the people realize windy weather happening more often, emphasis in the South with 44%.

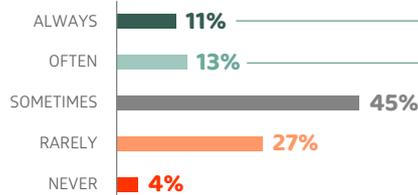

### Flood

**32%** of the people realize flood happening more often, emphasis in the Southeast with 40%.

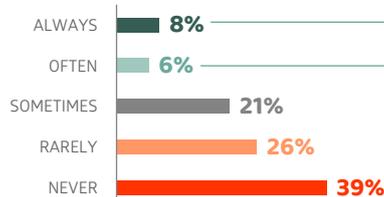

### Storm

**24%** of the people realize heavy rain and storm happening more often, emphasis in the South with 30%.

### Landslide

**14%** of the people realize landslide happening more often, emphasis in the Southeast and North east with 17%.

**69%**

102 millions of Brazilians

Know someone or were already affected by the climate changes consequences

**35%**

52 millions of Brazilians

Of the interviewed people were or had someone in their family affected by the extreme climate events consequences, such as:

**45%** heavy rain or storm;

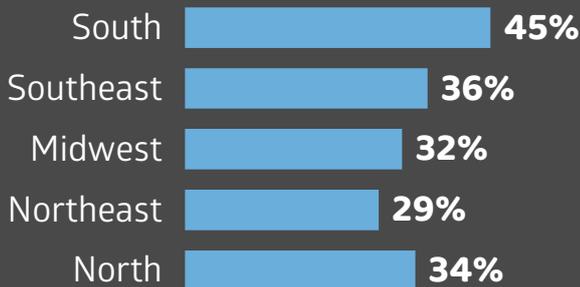

**21%** strong wind ;

**21%** flood;

**20%** heat wave;

**7%** long time of drought or without rain;

**5%** landslide.

**45%** of the South region of the country were already affected by some extreme climate event, which

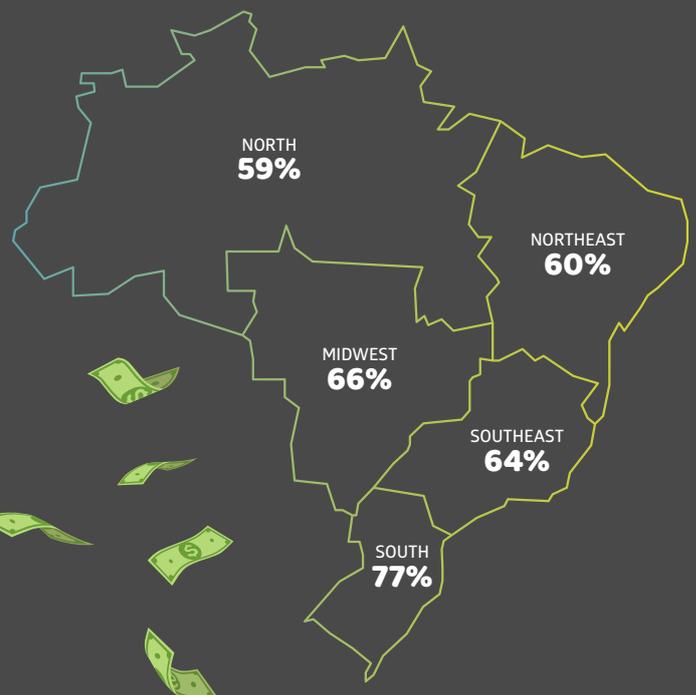

**65%** were impacted by flood

SHARE

Were you or someone in your family ever affected by any extreme climate event? | Single Answer | Base: 2000

Among the affected people **65%** had financial loss.

The average loss is **R\$ 8,485.00**

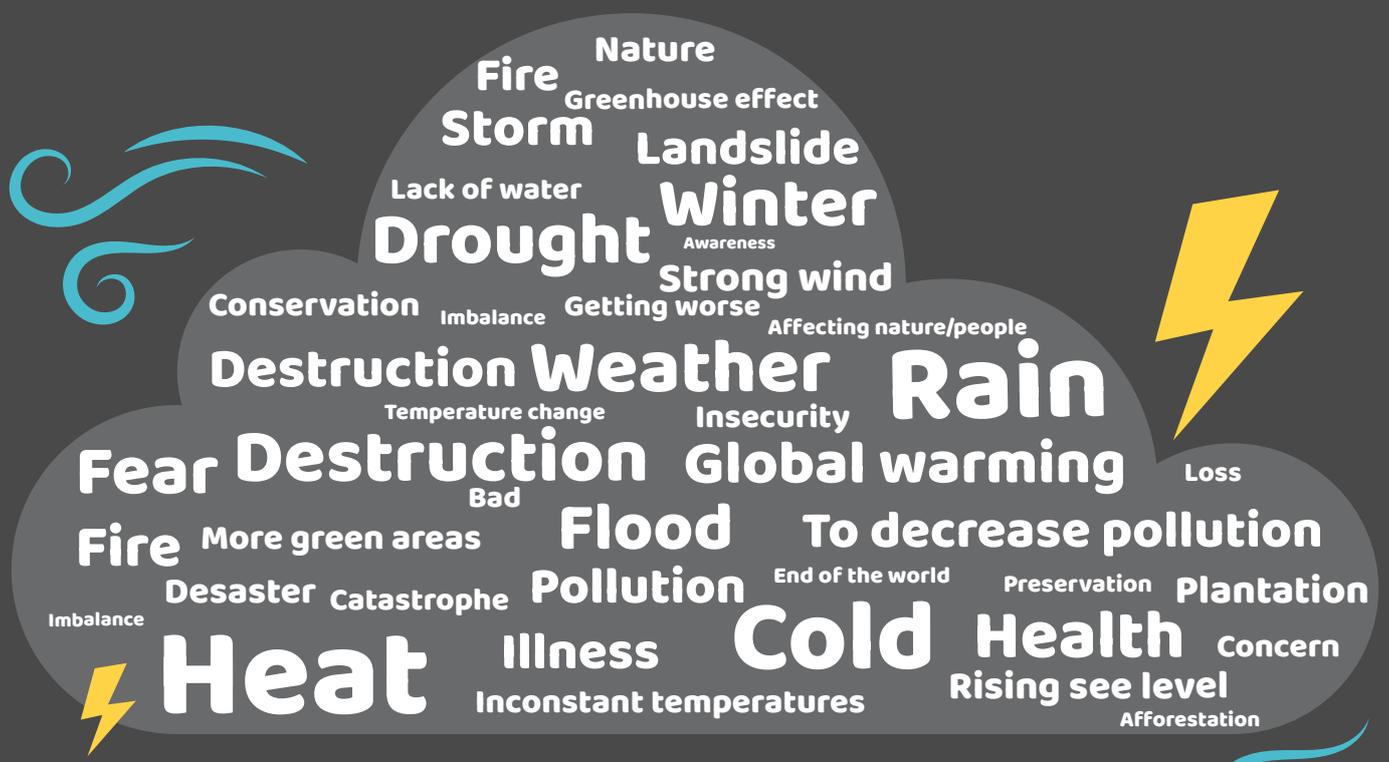

Did you have financial loss? How much was it? | Single Answer | Base: 702 - affected interviewed

A big challenge to talk about climate change is because most of the people relate it to negative emotions. It is about the biggest global challenge, however, the nature based solutions can help dealing with it, with part of the mitigation and adaptation strategies. Access the guide “Future cities: the nature based solutions helping facing the climate emergency”.

[ACCESS HERE](#)

# Climate Changes:

The weather has changed

**16%** of people which is equivalent to 14 million of Brazilians\*, claim not to know what comes in their mind when think about climate changes.

[SHARE](#)

## Main subjects mentioned:

- Extreme climate phenomenon
- Environment conservation and preservation
- Illness
- Nature and people impact
- Feelings and emotions (negative)

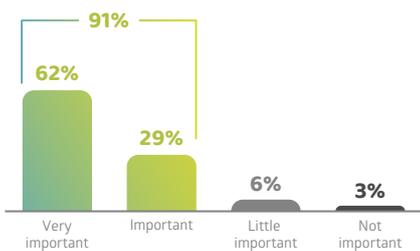

What is the main idea or image that comes in your mind when you think about climate changes?  
 Single and Spontaneous Answer | Base: 2000  
 \*Extrapolating to adult population

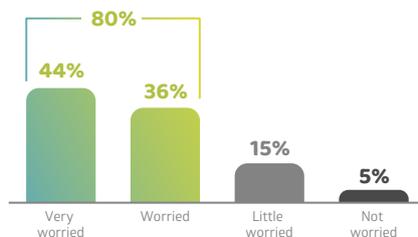

# The Brazilians are worried about climate changes

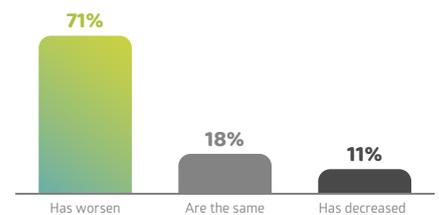

**91%** of the people believe that events like storm, heat wave, cold wave, hurricane, etc. are becoming more intense in the world.

**80%** of Brazilians are worried about climate changes.

**71%** realize that the extreme climate events are happening more often in people's life and has worsen in frequency and intensity.

**93%** believe that events like storm, heat wave, cold wave, hurricane, etc. are becoming more intense in the world.

**64%** know the climate change is far beyond planet warming.

**65%** already know that climate change is different from weather forecast. However, in the capital's average the percentage falls to 59%.

**92%** agree that the climate changes affect the animals and the biodiversity.

**92%** feel that the climate changes compromise the future of the planet.

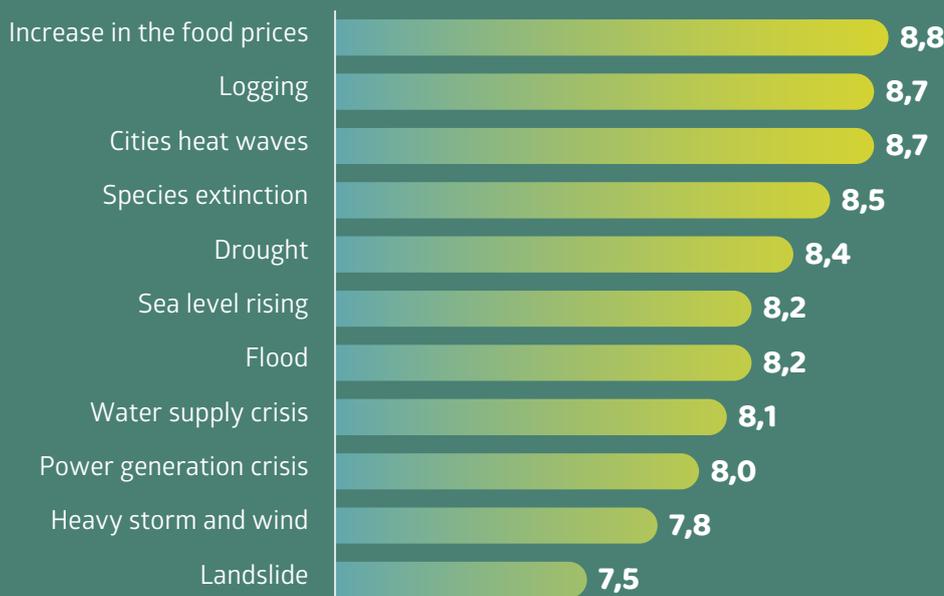

**91%** believe that the climate changes will have a big impact in future generations.

**88%** claim that the climate changes impact ocean and coastal areas.

There is a big concern about the climate changes impact on animals and biodiversity and also on future generations. The rate is even bigger among people with higher instruction level, such as post-graduation. However, the perception decreases significantly (10% fall) among people with education up to elementary school.

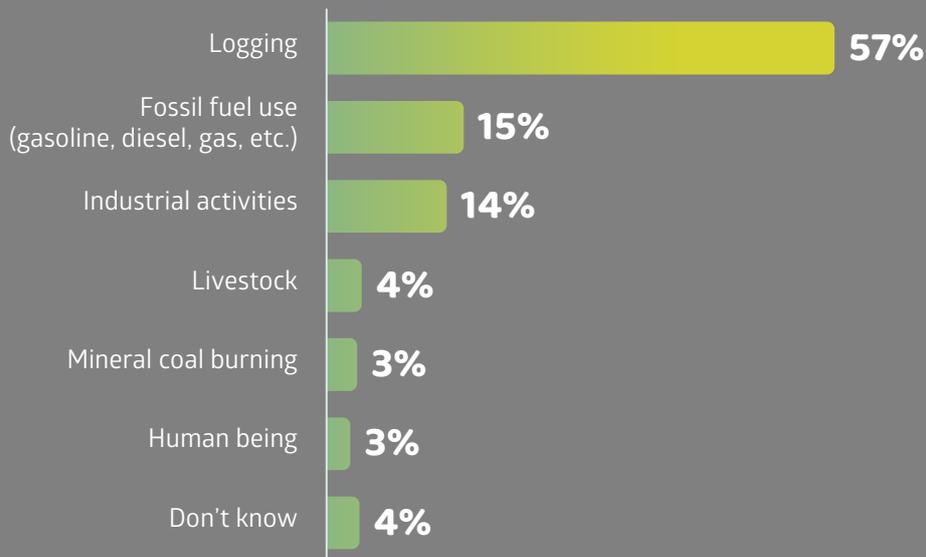

## THE POPULATION CONNECTS BIG CHALLENGES TO CLIMATE CHANGE (FROM 0 TO 10)

SHARE

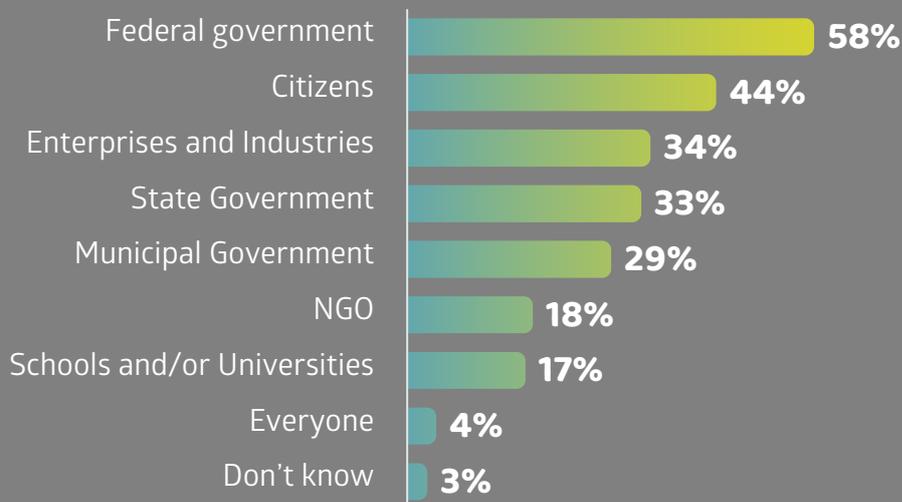

From 0 to 10 where 0 means there is no connection with climate changes and 10 means there is great connection, how much do you believe these situations are connected with climate changes: | Single and Stimulated Answer | Base: 2000

## WHAT PEOPLE BELIEVE TO BE THE MAIN CAUSER OF CLIMATE CHANGES IN BRAZIL

In Brazil, which of the factors do you consider to be the responsible for climate changes? | Multiple and Stimulated Answer | Base: 2000

## TO WHOM PEOPLE ATTRIBUTE THE RESPONSIBILITY FOR SOOTHING THE CLIMATE CHANGES

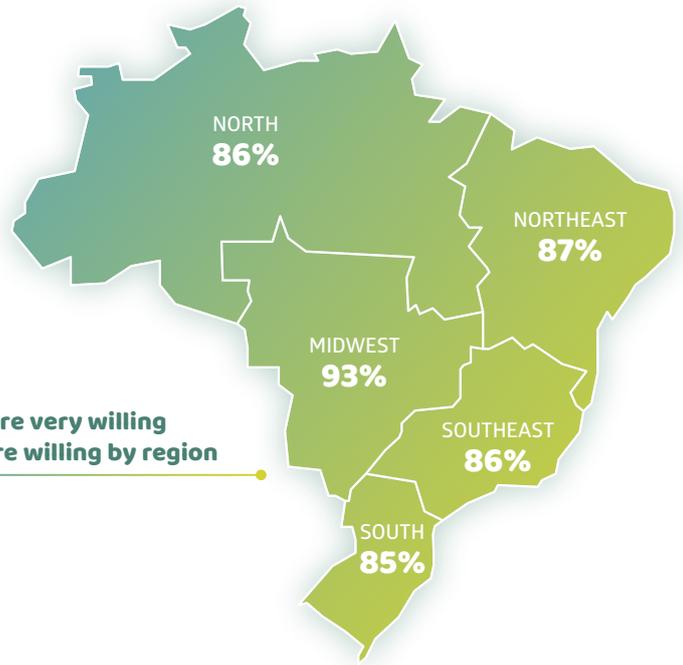

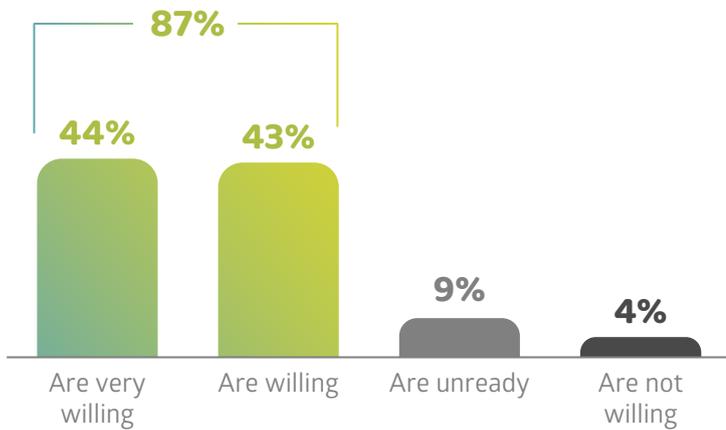

In Brazil, which of these factors do you consider to be the main responsible for climate changes? | Multiple and Stimulated Answer | Base: 2000

In relation to the causes of climate change and global warming, **57%** indicate the logging as the main responsible, followed by fossil fuel with **15%** and industries with **14%**.

**76%** think the cities can be adapted to reduce the climate change effects, protecting their population.

## The majority of brazilians are ready to change their habits

How willing are you to change your habits to stop climate changes? | Single and Stimulated Answer | Base: 1967

## Towards a positive transformation:

**87%** are willing or very willing to change their habits to soften the climate change effects. Among the mentioned actions are:

**24%** to recycle correctly;

**15%** to plant trees;

**8%** to avoid using plastic;

**8%** to use less polluting transportation.

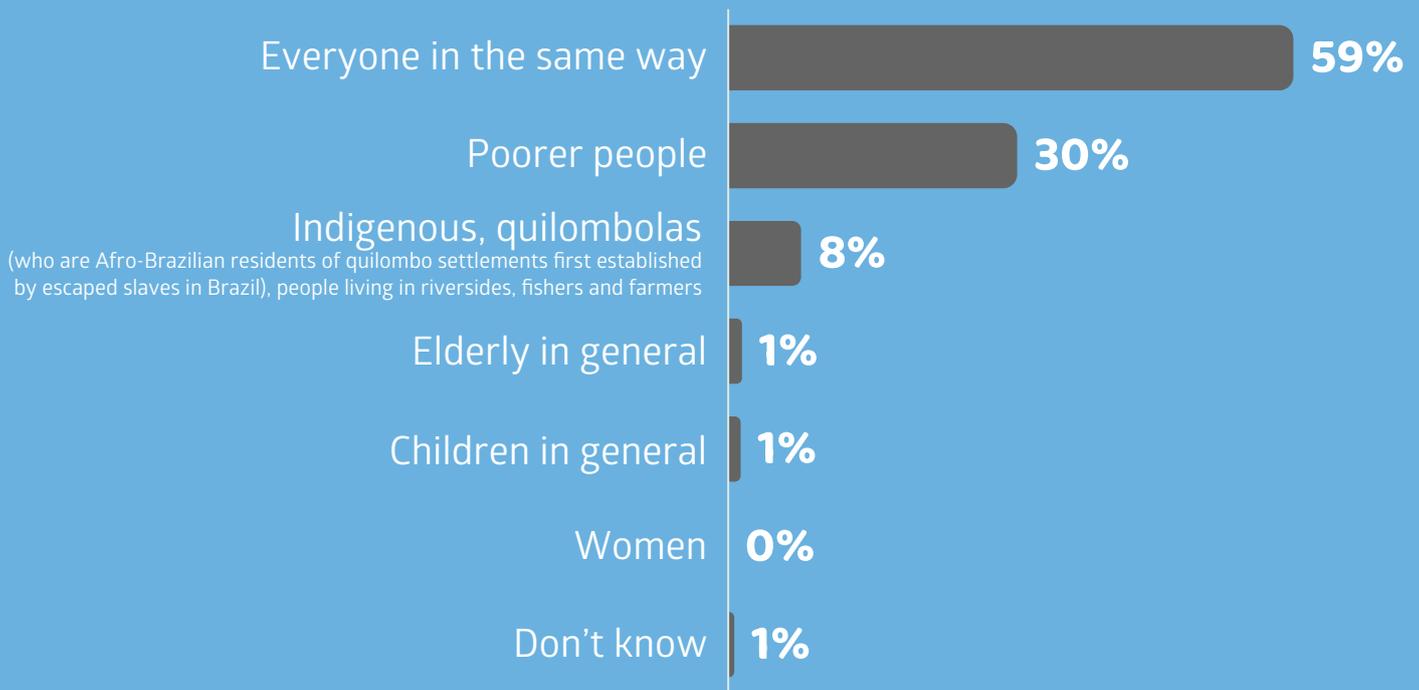

**19%** are willing to promote some habit changes, but don't know what can be done!

What kind of changes would you do? | Multiple and Spontaneous Answer | Base 1879 - interviewed willing to change their habits

# Climate justice

HOW THE BRAZILIANS BELIEVE THE POPULATION IS AFFECTED BY CLIMATE CHANGE:

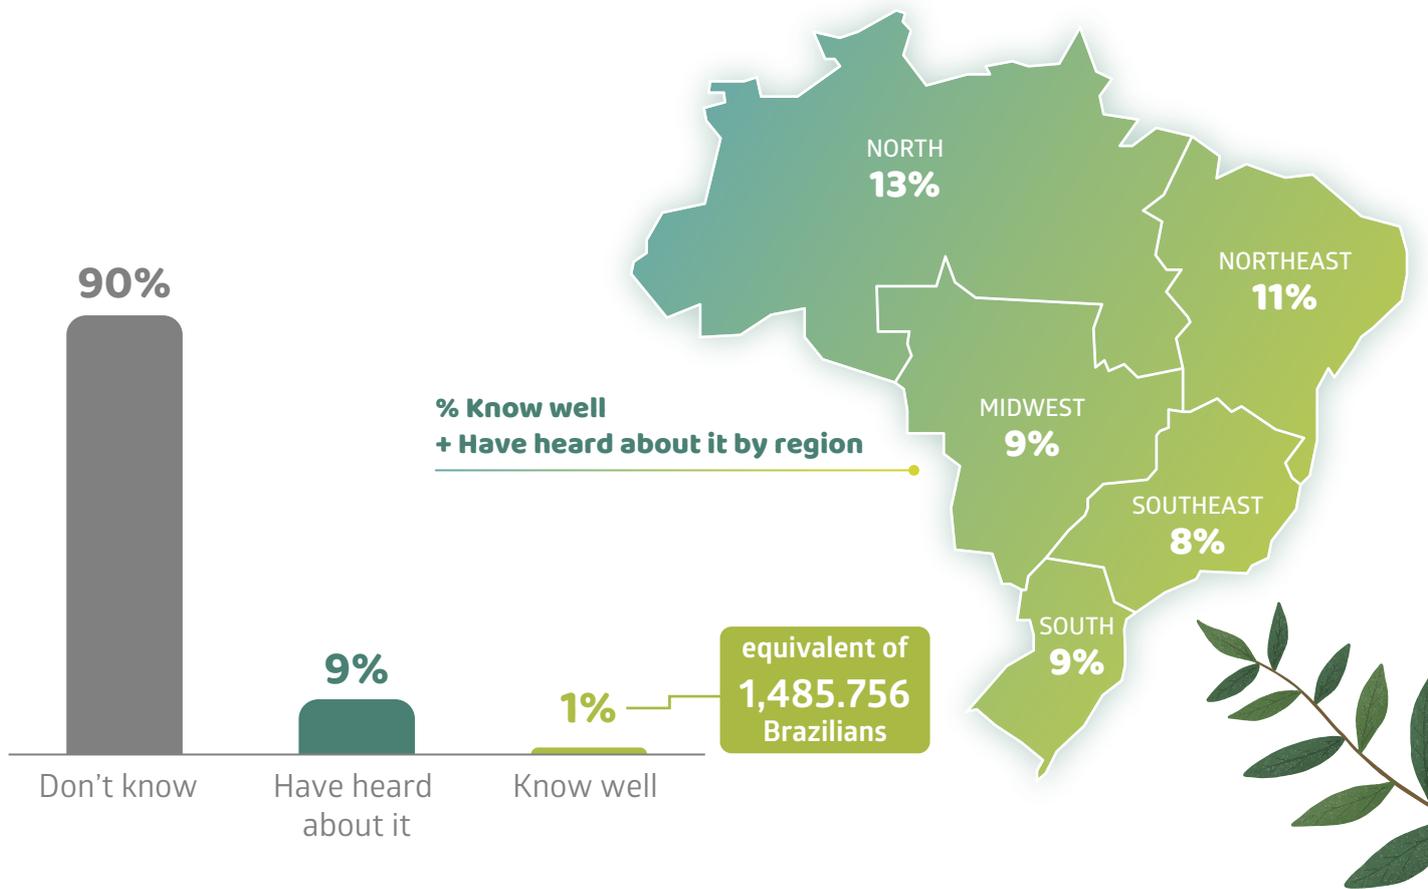

In your opinion, what portion of the population is the most affected by climate change? | Single and Stimulated Answer | Base: 2000

**59%** believe that everyone feels the impact of climate change in the same way. This perception is bigger in the North (65%)

**30%** consider that the poorer people are the most affected, emphasis in the South (37%).

**8%** consider that the quilombolas, people living in riversides, fishers and farmers are the most affected.

# Nature Based Solutions

Do you know or have you ever heard about Nature Based Solutions? | Single Answer | Base: 2000

Only **1%** of the population know well the Nature Based Solutions and 9% have heard about it. Among those who know or have heard the knowledge is superficial.

**At this point of the research the concept of NBS was introduced before proceeding the interview:**

*The Nature Based Solutions (NBS) are actions that use natural resources to solve human challenges, bringing environmental, social and economic benefits.*

*One of the challenges that NBS faces is the necessity to adapt the cities with green areas so they can be more resilient to climate changes.*

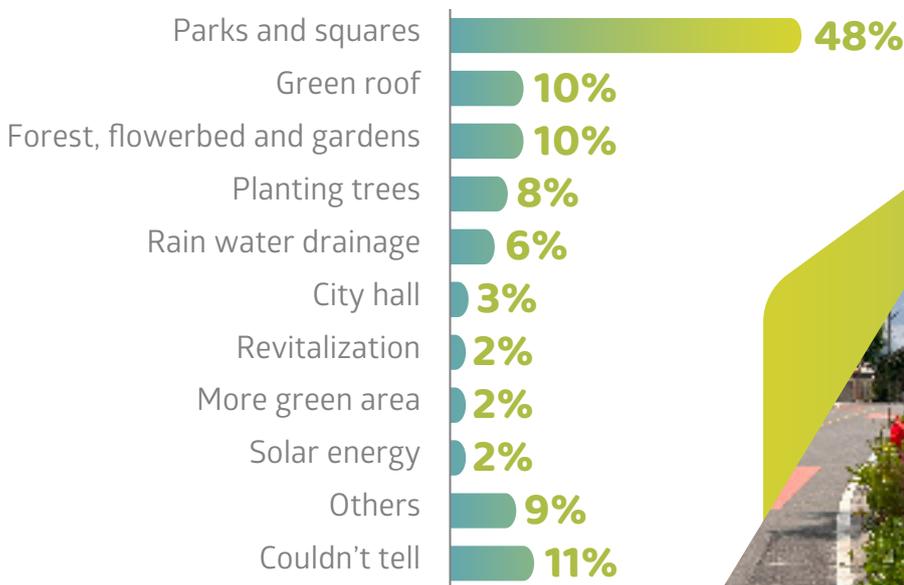

*Some NBS examples are: parks or squares, rain gardens that help to absorb rain water avoiding flood, green roofs to reduce internal temperatures, among others.*

After understanding the NBS, **14%** of the people could identify that already know some kind of NBS in their cities.

Do you know any kind of NBS in your city? | Single and Stimulated Answer | Base: 2000

## THE INTERVIEWED MENTIONED SPONTANEOUSLY THAT THEY KNOW THE FOLLOWING NBS IN THEIR CITIES:

What NBS do you know? | Multiple and Spontaneous Answer  
Base 280 - interviewed who claim to know some NBS in the city

Not all the actions mentioned are NBS, which indicate that the people didn't understand the term correctly yet.

## MOST NBS RELATED BENEFITS:

**45%** claim the NBS guarantee better quality life and health for the population.

**40%** believe the NBS improve the environmental conditions of cities, as reduction of temperatures and pollutants.

I am going to mention a list of NBS benefits. Please, indicate 2 that are the most important for you. | Multiple and Stimulated Answer | Base 2000

## More than 90% of the population want to see NBS in their cities!

The most desired NBS are:

**98%** **Tree-lined streets**

(native trees that help to reduce heat waves and bring thermal, visual and acoustic comfort) and parks, forest or big public green areas (which allow water infiltration when there is heavy rain, or to reduce heat island).

**95%** **Filter gardens**

(to treat polluted water through plants).

**95%** **Green halls**

(areas with vegetation along streets or rivers).

**95%** **Rain gardens**

(to retain rain water reducing flood).

**95%** **Green preserved areas along rivers, lakes and slopes**  
(mangroves).

**91%** **Rivers and lakes interconnected to urban environment**  
(which help to retain water when there is heavy rain).

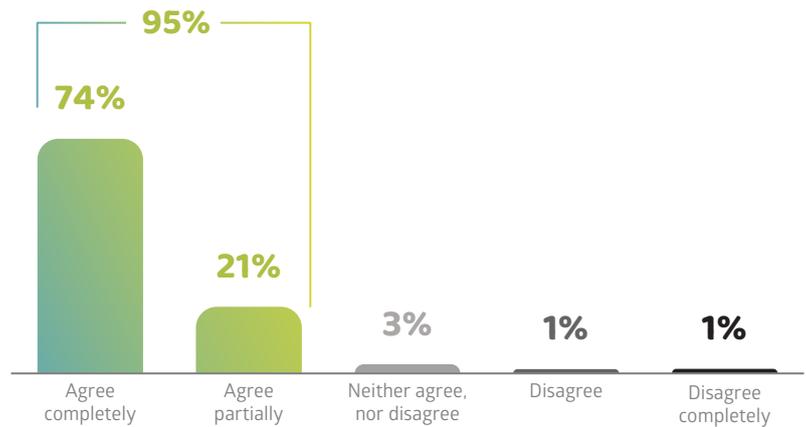

**90%** **Green roofs**

(building with plants in the roof helping to reduce the temperature).

What kind of NBS would you like to see in your city? | Multiple and Stimulated Answer | Base: 2000

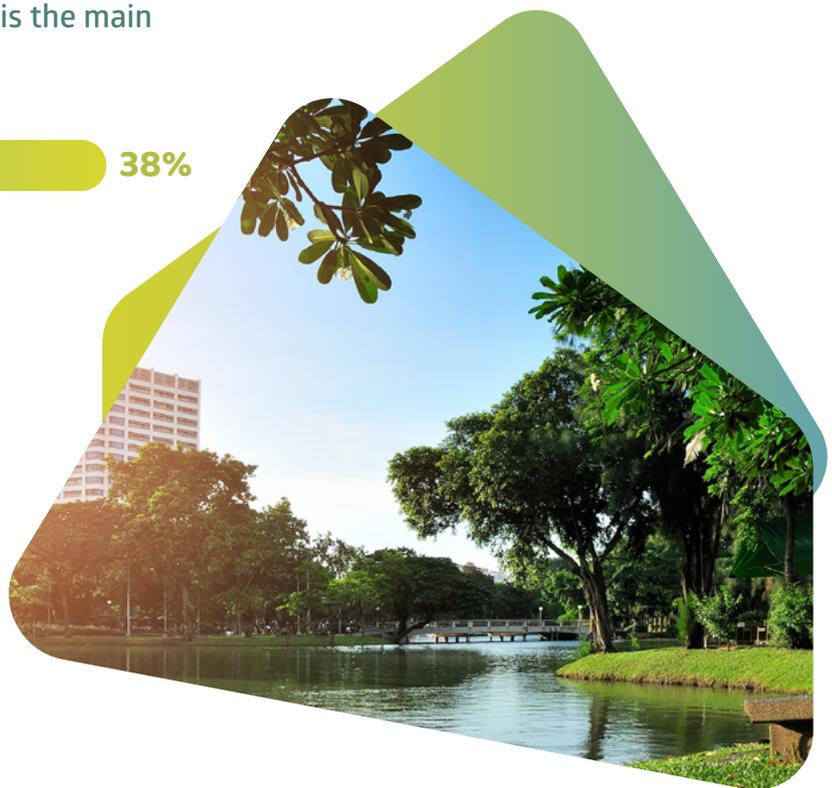

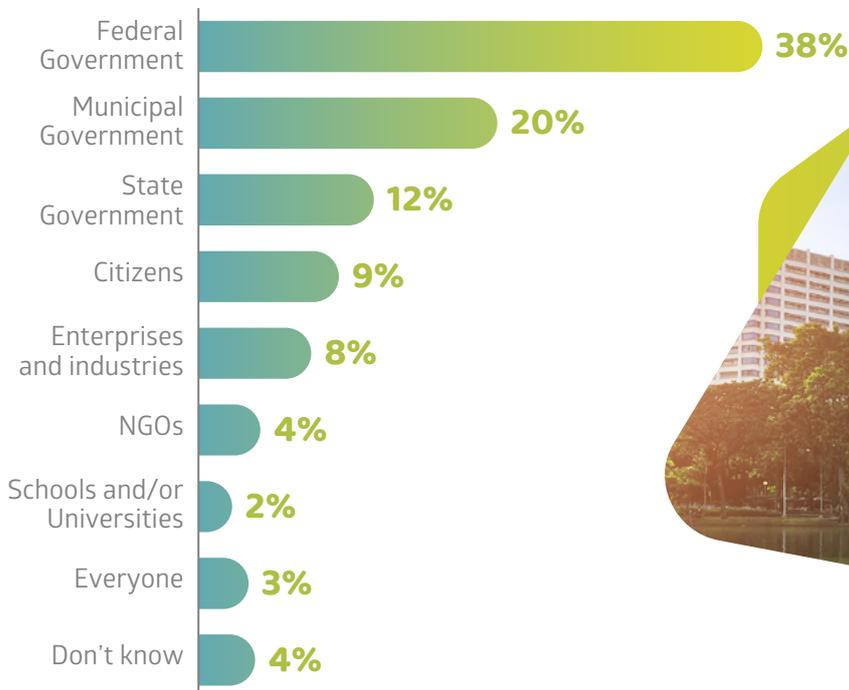

**In general, every NBS mentioned would be welcome in cities, with more than 90% acceptance for every typology introduced.**

## More than 95% of the population believe NBS can reduce the impact of climate changes!

How much do you agree the NBS can reduce the impact of climate changes? | Single and Stimulated Answer | Base: 1984

## 38% believe the Federal Government is the main responsible for NBS implementation

In your opinion, who would be the responsible to adapt the cities to climate changes impacts? | Single and Stimulated Answer | Base: 2000

## 94% consider important for a candidate to introduce NBS related proposals.

# Final Considerations

Most of the interviewed people relate to nature going to parks, beaches, gardens and other natural areas, besides searching physical and mental health balance there.

Most people realize the cities green areas are decreasing and this perception is even bigger in capitals affected by disasters.

The afforestation perception is three times bigger in cities that were not affected comparing to affected ones.

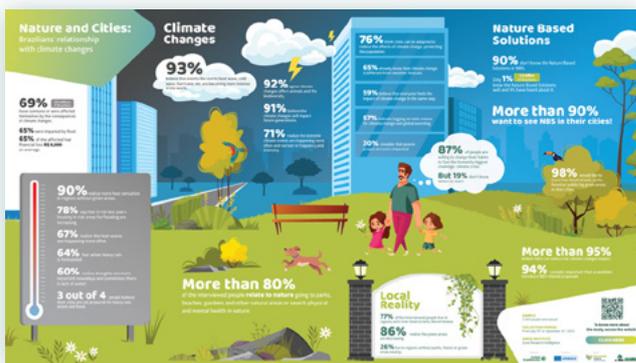

Most people realize that the extreme climate events are getting worse in the world. Among people with higher educational level the importance of the climate changes is bigger and its effects on biodiversity, people's life and future generations.

A little more than a third was affected or know someone who was affected by some kind of extreme climate event, mainly victims of heavy rain and flood. The great majority of the population disagree that their cities are ready for heavy rain, storm and flood.

Most people are willing to change their habits and among the most mentioned actions were: to recycle correctly (24%), to plant trees (15%), to avoid using plastic (8%) and to use less polluting means of transport (8%). 19% of people want to do something but don't know where to start!

Despite the population unfamiliarity about NBS, most people believe the cities can be adapted to climate changes and also that the NBS can contribute in this process.

Almost every interviewed people would like to see NBS in their cities. Moreover, most people think it is the government responsibility to implement such actions and almost the majority of the population consider important a candidate to introduce NBS related proposals, what indicates a population demand to include NBS in territorial management policies.
